Dear Hiring Team,

My name is Ottó Kosik, a 24-year-old IT engineering student at Óbuda University's John von Neumann Faculty of Informatics, specializing in cloud technologies and IT security. I would like to bring my profile to your attention and express my openness to IT positions — particularly backend, full-stack, or systems operations roles — that align with my studies and professional experience.

Alongside my studies, I try to learn as much as possible through hands-on practice. I currently work as an Operations Intern at the IT Department of the National Tax and Customs Administration, where, besides my daily tasks, I independently built a Java-based automation tool on request. Since October 2024, I have also been actively involved as a full-stack developer — with a backend and DevOps focus — in the IT division of O.U.R Team (Óbuda University Racing Team), where I have contributed to several projects and taken ownership of unfinished work to bring it to completion.

I spend much of my free time developing my programming and IT knowledge as well: I am self-taught in web development, server administration, and setting up and maintaining various IT services — the result being, among other things, a self-hosted, on-premise portfolio server and several independently designed, containerized backend systems. I enjoy it when a task presents a genuine challenge, and I'm happy to dig into the technical background of a problem until I fully understand how it works.

I also enjoy working as part of a team, and I place great value on clear, supportive communication: as a teaching assistant, I regularly help fellow students work through programming and algorithmic problems, which has reinforced my enjoyment of sharing knowledge with others and my preference for working in a prepared, reliable way.

I would be glad to work in an environment where I can both deepen my existing knowledge and pick up new technologies and methods. I am driven by a desire for continuous learning and growth, and I would like to put the knowledge gained through my university studies and my projects to use on a team where I can take on genuinely challenging work.

If I have caught your interest, I would be happy to speak with you in person or online. Thank you for taking the time to read my application.

Best regards,

Ottó Kosik
